

# WIICARE

## Medical Papers

Excellent sealing and peeling properties  
with Wiicare films

# Medical Papers

Various grades of medical paper are used as lidding materials on both thermoforming and flat pack machines. These papers allow the sterilisation agent - either gas or steam - to penetrate the pack effectively.

The Wiicare product range includes a wide selection of papers specifically developed to ensure a clean peel when used with Wiicare films.

MEDICAL PAPERS				
Product Name	Coating	Grammage	Sterilization	Description
Gas Paper	Uncoated	60, 70, 80	EO, IR	An economical grade with good seal and peel properties.
Gas Paper Plus	Uncoated	60, 70	EO, IR	A grade with medium seal strength and clean peel properties.
Gas Paper HP	Uncoated	60, 70	EO, IR	An improved grade with higher seal strength.
Gas Paper LC / FourSS	Light coated	63	EO, IR	A treated paper grade designed as an alternative to coated papers for better economy.
Gas Paper LC	Light coated	83	EO, IR	A stronger quality, treated paper grade designed as an alternative to coated papers for better economy.
Lacquered paper	Coated	70, 74, 110	EO, IR	Grid lacquered paper grade for applications where totally clean peel and/or a visible opening pattern for visual quality check purposes are required.
Steam Paper	Uncoated	60, 100	Steam	Economical quality with good seal and peel properties.
Steam Paper HS	Uncoated	60	Steam	Improved quality with higher seal strength.
Steam Paper HP	Uncoated	70	Steam	Improved quality with higher seal strength.
HS = High Seal, LC = Light Coated, HP = High Peel
